

DHRUV MAVANI

AI DEVELOPER

Bhavnagar, Gujarat, India | dhruvmavani58@gmail.com | +91 92658 61911 | github.com | [linkedin.com](https://www.linkedin.com)

PROFESSIONAL SUMMARY

AI Developer with a BCA (Bachelor of Computer Applications) and currently pursuing an M.Sc. in Artificial Intelligence, with 7 months of professional experience as an AI Developer. Hands-on experience building real-world AI solutions across two major production projects, ExamBro and SKAIS, spanning LLM applications, RAG pipelines, and conversational AI voice agents.

CORE SKILLS

Programming & Data: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL

Generative AI & LLMs: Prompt Engineering, OpenAI API, Google Gemini API, Anthropic Claude API, Hugging Face Transformers

RAG & Vector Search: RAG Pipeline Design, FAISS, Pinecone, Embeddings, Chunking Strategies

AI Agents & Orchestration: LangChain, LangGraph, Google ADK, MCP, Tool/Function Calling, AI Automation, Multi-Agent Workflows

Backend & API Development: FastAPI, Django, RESTful API Design, Postman

Databases: PostgreSQL, MongoDB, MySQL, SQLite, Supabase

Cloud & DevOps: AWS, Docker, Git, GitHub

Dev & AI Tools: VS Code, Cursor AI, Claude Code, Google Antigravity, Claude Design

Additional Knowledge: OCR, Mistral OCR, PyTorch, Scikit-learn, System Design, PyMuPDF, AI Cost & Token Optimization

WORK EXPERIENCE

AI Developer — Cloudus Infotech

Dec 2025 – Jun 2026

Surat, Gujarat, India | 7 months

- Built a voice AI agent using the Retell AI SDK that answers live customer calls for a restaurant ordering platform — sharing menu items, prices, and availability, and taking full orders or reservations without a staff member picking up the phone.
- Fixed an early hallucination problem where the agent gave wrong or confusing answers mid-call by rewriting and fine-tuning prompts and tightening guardrails until responses held up reliably across real calls.
- Connected the agent to a RAG knowledge base so it could pull restaurant-specific answers — location, hours, policies — from uploaded documents instead of hardcoded scripts.
- Built the backend (FastAPI, Supabase) that logs full call transcripts and customer details after every call, and used the Twilio SDK to automatically send SMS order and reservation confirmations.
- Built an OCR pipeline (Django, FastAPI, PyMuPDF, Mistral OCR, Gemini AI) for a separate exam-prep platform that pulls questions, answers, and diagrams out of any PDF format — including fixing a diagram-alignment bug — and deployed it in Docker for a stable, repeatable setup.
- Deployed and hosted the production backend on AWS, resolving environment and configuration issues along the way.
- Used Git/GitHub throughout and worked across the full lifecycle — requirement analysis, system design, implementation, testing, and deployment — for both platforms.

KEY PROJECTS

ExamBro — Question Extraction & Exam Management System

Python, Django, FastAPI, PyMuPDF, Mistral OCR, OpenCV, Gemini AI, Supabase

Problem: Teachers were manually typing every exam question, answer, and diagram into the student portal — slow and error-prone.

- Built an OCR pipeline (Mistral OCR) that pulls questions, answers, solutions, diagrams, and options straight out of any PDF a teacher uploads, removing manual entry entirely.
- Fixed a recurring bug where diagram positions were shifting out of alignment with their questions during extraction.
- Used Gemini AI via LangChain to convert raw OCR output into structured JSON and auto-fill missing answers where possible.
- Deployed the pipeline in Docker containers and added multilingual translation support plus bulk question management in the admin dashboard.

SKAIS — AI-Powered Restaurant Order Management System

Python, FastAPI, Retell AI SDK, Next.js, Supabase, Gemini AI, LangChain, Twilio SDK, Square POS

Problem: Restaurants relied on staff to answer every phone call for orders and reservations — missed calls during busy hours and ongoing staffing cost.

- Built a voice AI agent (Retell AI SDK) that answers the restaurant's phone line directly, sharing menu items, prices, and availability, and taking full orders or reservations without a human on the call.
- Connected the agent to a RAG knowledge base holding restaurant-specific details (location, hours, policies) so it answers general customer questions accurately.
- Built live price and prep-time calculation into the call flow, plus automatic SMS confirmation sent to the customer right after an order or reservation.
- Gave restaurant owners a settings page to adjust reservation rules and agent behavior without touching code, and built a companion support chatbot (LangChain) for the SaaS platform.
- Handled 103+ live calls in production at roughly \$1,000–\$1,500/month in software cost, versus \$2,000–\$3,000/month for a human phone operator.

EDUCATION

Bachelor of Computer Applications (BCA)

2022 – 2025

Maharaja Krishnakumarsinhji Bhavnagar University (MKBU)

M.Sc. — Artificial Intelligence

2025 – Present

Maharaja Krishnakumarsinhji Bhavnagar University (MKBU)
